

APRI Bulletin

Welcome to the eight edition of **APRI Bulletin**. APRI and all members are campaigning sustainability crab harvest to the supply chain for effective impact, increasing crab recruitment through stock enhancement, collaborating with Universities to support scientific research, supporting Ministry of Marine Affairs and Fisheries to develop national Fishery Management Plan and working closely with Fishers community to establish community based fishery management. All project activities are managed in a Fishery Improvement Project (FIP), which determined as 6 FIP stages. Fishery Improvement Project will create sustainable impact to the supply chain, blue swimming crab resources and also to the ecosystem where the blue swimming crab harvested. Details of these activities and more please kindly visit website www.apri.or.id

Focus Group Discussion: Mapping Miniplant of Blue Swimming Crab in South Sulawesi

INDUSTRY

Lampung Site Visit

Lampung Site Visit is a program that was organized by Starling Resources, Sustainable Fisheries Partnership, and EDF-YBUL which is facilitate the funding partners to see directly the field condition at the several industries of blue swimming crab supply chain in Lampung, directly interact with the performer in all supply chain level, and discuss with the government and other stakeholder. Lampung Site Visit held on November 3-5, 2018 in Lampung.

About Us

The organization APRI - whose members include over 30 seafood industry businesses and processors - covers more than 85% of purchased crab in Indonesia. All members involved are working to promote not only sustainable crab harvest, but a sustainable supply chain as well. The FIP aims to support scientific research through collaborations with Universities, to develop a national Fishery Management plan through a partnership with the Ministry of Marine Affairs and Fisheries, and to establish community based fishery management by working with local fishing communities. The FIP is meant to have a lasting impact on the sustainability of the fishery's supply chain, on blue swimming crab resources, and also on the ecosystem where the species is harvested.

FIP Objective(s)

- Change practices (no take of small crabs/juveniles, no take of egg-bearing females), increase the stocks, develop policies that protect and sustain crabs (including protection of nursery ground, spawning area) by end of December 2022
- Develop a management plan for Indonesian blue swimming crab that includes community resources management that protects nursery ground; produce a control document by end of December 2018

APRI Members

APRI Partners

APRI is grateful to all partners, collaborators, and supporters from individual and institution for their contribution on the sustainability of Indonesian Blue Swimming Crab.

- Implement FIP workplan that includes development of the management plan, community-based management, communication and awareness, nursery and spawning grounds protection projects, as well as a hatchery project by end of December 2018

Indonesia FIP Status Report

Assessment of the fishery against three internationally recognized protocols for sustainably sourced seafood. The assessment suggests:

The FIP Currently at **SFP Stage 4 : Improvement in Fishing Practices of Fishery Management** – and Progress Rating got A (Exceptional Progress)

The fishery has been assessed in 2015 using the MSC's Fishery Assessment Methodology (V2.0) for sustainable fisheries.

The fishery has been assessed using the Monterey Bay Aquarium's Seafood Watch Criteria of capture Fisheries (v2.0).

The online progress of Indonesian BSC can be followed through website **fisheryprogress.org**
